

WORK ORDER NETWORK

WELCOME TO THE NEXT LEVEL OF FACILITY MANAGEMENT

The Work Order Network (WON) is a web-based management and communication platform that connects you to your contractors and service vendors in a way you've never seen before...

- **Control:** WON provides the control of an in-house team with the financial benefits of outsourcing. The same simple method of dispatching and tracking works for both your internal technicians and your external vendors.
- **Simplify:** Spend no more time tracking down vendors, automate your work order-to-invoice matching, and eliminate the scattered documentation created from phone calls, faxes, email and paper invoices.
- **Save:** Reduce overhead by enabling your staff to efficiently manage all your vendors and by automating the service request process.
- **Report:** Receive reports on which facilities and equipment require the most maintenance. Create vendor performance measurements then see how your vendors stack up.

How It Works

When a service need is identified, either from a service request or as part of regularly scheduled maintenance, work orders can be created and dispatched over the WON to any service vendor.

Service vendors receive a notification alerting them of the new work. If they can fulfill the requirements, they accept the work order and you are immediately notified.

Notes and updates can be sent back and forth, creating history logs in each company's system. When the work is done, the service vendor provides completion information, their performance is scored, and you immediately have a complete picture of the work performed.

Your vendors create and submit invoices directly into your system where they can be reviewed, approved and then manually or automatically sent to Accounts Payable.

It's just that simple. And WON is a secure web based service. With no software to purchase or install, you and your vendors can be up and running in no time.
